

REMARKS

In accordance with above amendments, clarifying language has been placed in independent claim 63 and 64 which more precisely determines the relation in the parts and the limitation of the curved operating arms directed to reduce the lift-and-dump radius of the mechanized pivoting arm lift-and-dump arrangement.

Applicants believe that the particular combination including the shortened radius and particular mechanization and control render the claim apparatus patentably distinct from the art cited in various combinations by the Examiner. It is not believed that the references would have suggested modifications which would have resulted in the particular construction claimed and that it is only looking for aspects and elements in retrospect or by hindsight in several mechanisms which would result in a system that could include the presently claimed combination of elements. Each of the references is directed to solve or improve different aspects or different types of systems and together no combination leads to the claimed device.

In view of the above amendments, taken together with the remarks herein, applicants believe the claims are patentable distinct. Entry of this Amendment and reconsideration and allowance of the claims is respectfully requested.

Respectfully submitted,

NIKOLAI & MERSEREAU, P.A.
